Topic: Automate file organizer

AUTOMATE FILE ORGANIZER

Slide 1: Title

Automated File Organizer

A Python-based project
Automatically organizes files into folders based on file type

Slide 2: Introduction

Managing files manually is time-consuming.
Files often become scattered and difficult to find.
Automated File Organizer solves this problem by organizing files automatically.

Slide 3: Objectives

Organize files automatically.
Reduce manual effort.
Improve file management.
Save time and increase productivity

Slide 4 :Problem Statement

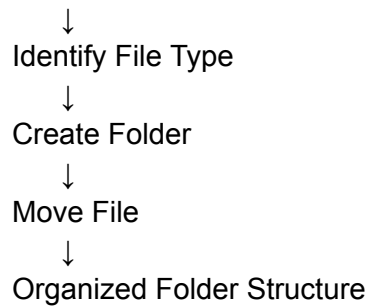

Downloads folder becomes cluttered.
Different file types are mixed together.
Finding files takes longer.
Slide 5: Proposed Solution
Scan a selected directory.
Detect file extensions.
Create folders for different categories.
Move files to appropriate folders automatically.

Slide 6: Technologies Used

Python
os module
shutil module
File system operations

Slide 7: System Architecture

Input Folder
↓
Scan Files

Slide 8: Algorithm

Select folder.
Read all files.
Check file extension.
Create category folder if needed.
Move file to corresponding folder.
Repeat until all files are organized.

Slide 9: Sample Code

```
Python
import os
import shutil

path = "Downloads"

for file in os.listdir(path):
    src = os.path.join(path, file)

    if os.path.isfile(src):
        ext = file.split('.')[-1]

        folder = os.path.join(path, ext.upper())

        os.makedirs(folder, exist_ok=True)
        shutil.move(src, os.path.join(folder, file))

print("Files Organized Successfully")
```

Slide 10: Advantages

Fast file organization
Easy to use
Reduces clutter
Improves productivity

Slide 11: Applications

Personal computers
Offices
Educational institutions
Data management systems

Slide 12: Conclusion

Automated File Organizer simplifies file management.
Saves time and improves efficiency.
Can be enhanced with GUI and scheduling features.

Slide 13: Future Enhancements

Graphical User Interface (GUI)
Automatic scheduling
Cloud storage support
Duplicate file detection

THANK YOU ☺
